

Wound Clinic

Wound Education Program 2019

Program Overview

This is a didactic and hands on program designed to provide care givers with up-to-date information, tools and strategies to improve outcomes for clients living with wounds in the community setting.

The program will cover topics on how wounds heal, factors affecting wound healing and how to assess, manage and prevent common wounds. This practical program will include demonstration of techniques used in providing wound care including how to select and apply dressing products and compression bandaging.

Learning Objectives

- To understand the anatomy and physiology of wound repair and the body's response to injury
- To identify factors that may impact on wound healing
- To develop skills in the assessment of a wound and how to perform a holistic client assessment
- To identify, treat and prevent common wound types
- To recognise when to refer clients
- To examine dressing products and how to select and use them
- To understand and demonstrate bandages and their role in retention, support and compression
