Treating Hepatitis C in General Practice Forum (VIRTUAL)

Think National, Act Local – Hep C Elimination in Your Practice

Saturday, 29th May 2021 – 9.00am – 3.00pm (AEST)
Cost: FREE to GPs practicing in Australia

This one-day forum brings together General Practitioners from around Australia to discuss their experiences, strategies for success and innovative models of care for the treatment of people living with hepatitis C in a range of primary care and priority settings.

Learning Outcomes:

- Identify risk factors and perform assessment for advanced liver disease using the Australian Recommendations for the Management of Hepatitis C Virus Infection
- Explain how direct acting antiviral treatments enable management of hepatitis C in general practice
- Discuss the role of GPs in helping to eliminate HCV in Australia by 2030
- Identify and implement strategies for overcoming barriers to treating hepatitis C in priority populations
- Evaluate the feasibility of alternative models of care for the treatment of hepatitis C

ASHM encourage all General Practitioners to submit an abstract to present on their experience treating hepatitis C in primary care. Abstract submissions from GPs who are new to this area are strongly encouraged. To submit an abstract, click [here](#)
